Safety & Warnings

• DO NOT install with power applied to device.
• DO NOT set the operation current with power applied
• DO NOT expose the device to moisture.

Operation

1. Output Current

Select the correct output current before wiring to LED light by DIP Switches. Please make sure the power to the driver is disconnected before selection of the output current.

2. Set DALI Address Manually Via Buttons

1 DALI addresses for 1 channel output can be set manually via buttons:

2.1. Press and hold down any of the two buttons until numeric digital display flashes, then release the button.

2.2. Click any of the two buttons once to select a digit, click again to change the digit until the desired DALI address appears. Click first button to set "tens" position and second button to set "units" position. The address can be set from 00~63.

2.3. Then press and hold down any of the 2 buttons until the numeric digital display stops flashing to confirm the setting.

0-6   0-9

Note: DALI address can be manually assigned from 00-63-FF, by factory defaults, no DALI address is assigned for the driver, and the display shows FF **. Setting DALI address as** FF **will reset the dimmer to factory defaults.**
FF **Mode: to set the driver to** FF **mode, please set the DALI address above 63 or below 00, which will enable the display to show** FF **, then press and hold down any of the two buttons until display stops flashing to confirm the setting.**

3. DALI Address Assigned by DALI Masters

DALI address can also be assigned by DALI Master controller automatically, please refer to user manuals of compatible DALI Masters for specific operations.

Note: The digital display will show AU **When the DALI master is assigning addresses.**

4. Set DALI Address Quantity

3.1 Press and hold down both of the two buttons until numeric digital display flashes, then release the button.

3.2 Click first button to select "1A" or "2A" which means 1 address or 2 addresses.

3.3 Then press and hold down any of the 2 buttons until the numeric digital display stops flashing to confirm the setting.

0-6   0-9

For example, when we set address to 22:
When select 1A, both two channels will be the same address 22.
When select 2A, channel 1 will be address 22, channel 2 will be address 23.

5. PUSH Dimmer Mode

While connected with a AC PUSH, the digital display will show "PD" which means Push Dimmer Mode, operations under Push Dimmer Mode are as follows:
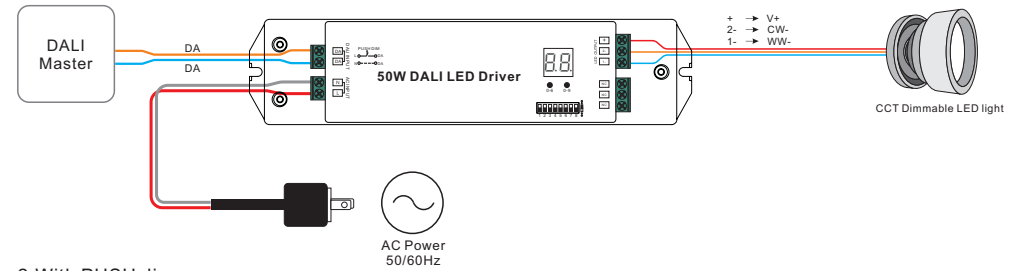

5.1. Click the button to switch ON/OFF

5.2. Press and hold down the button to increase or decrease light intensity to desired level and release it, then

repeat the operation to adjust light intensity to opposite direction. The dimming range is from 1% to 100%.
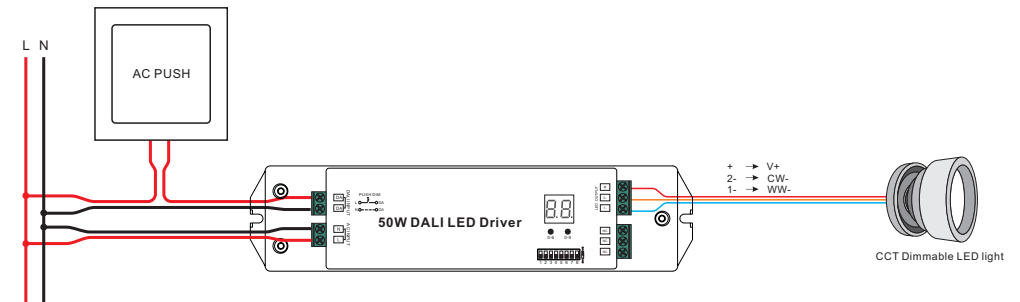

5.3. Memory function after power off or power failure enables the device to memorize the status before power off while power on again.
